Back End: Node (Express)
Version Control: Git, GitHub, BitBucket
Testing: Jest

Employment

Accenture
Frontend Developer - Apr. 2019 to Current - Chicago, IL

- Built an ecommerce website using Shopify for a client's mobile ordering and pickup project, adding new features not natively available on the platform via HTML, CSS, JavaScript, GraphQL, and Apollo to meet specific requirements
- Quickly learned how to develop for the Echo Show and joined an on-going project to help a client build a digital voice assistant application, developing both a GUI and VUI
- Worked with large retailers to improve their websites' performance, such as reducing the time to interactive, using a variety of techniques and technologies
- Came up with the idea for and developed an internal full stack application that checks what desks are available in the office and allows co-workers to make desk reservations

Kellogg School of Management
Course Logistics Specialist (Contract) - Dec. 2017 to June 2018 - Evanston, Illinois

- Built a Chrome extension for Canvas, a learning management system, to save time on various projects, such as creating and sorting student groups
- Developed web applications for creating seating charts and student information cards to improve efficiency across several departments

Harris School Solutions
Web Software Developer Apprentice - Apr. 2017 to June 2017 - Remote

- Added validation and transformation functionality for inputted user files, returning descriptive error messages to clients when applicable
- Added an extensive amount of unit tests to ensure code quality

Education

University of Southern California
BA Cinema-Television
